

RETROFITTING TRADITIONAL AND HISTORIC BUILDINGS

IHBC EAST MIDLANDS BRANCH

The UK is committed to net zero by 2050. Historic, listed and traditionally constructed buildings present amazing opportunities to reduce energy use and take advantage of their low embodied carbon. But these buildings can be vulnerable to inappropriate retrofit measures.

In the worst cases these can lead to the deterioration of the building's structure and fabric, increasing heat loss through damp, mould and decay.

This invaluable and timely training course highlights the issues and covers the most recent government and Historic England guidance, including the new editions of PAS 2030 and PAS 2035, which give updated guidance for traditional and protected buildings.

CONTENT

- Session A: Climate Change, Sustainability and the Case for Retrofit
- Session B: The Retrofit Process: Assessment, Decisions and Delivery
- East Midlands IHBC AGM held over the lunch break - all welcome to learn how your branch works for you.
- Session C: Retrofit Standards and Building Science

This CPD will be of interest to those practicing in the Surveying; Engineering; Building Control; Architectural; Heritage, Planning and Facilities Management fields.

SPEAKER

Professor John Edwards, MA, DipBldgCons, CEnv, FCIQB, FRICS, IHBC
Director of Edwards Hart Consultants - nationally renowned authority on sustainable retrofit.

EVENT DETAILS

TUESDAY 6TH OCTOBER 2026
09:00 – 16:00
